EDUCATION

SRI VENKATESWARA COLLEGE OF ENGINEERING(SVCE)

Tirupati, Andhra Pradesh, India

Bachelor of Technology in Computer Science and Engineering (AI & ML)

Graduated: April 2026

Cumulative CGPA: 9.55/10

Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Object-Oriented Programming, Machine Learning, Operating Systems, Computer Networks

PROFESSIONAL SUMMARY

Motivated Computer Science graduate specializing in AI & ML with strong backend development skills in Java and Spring Boot. Experienced in building scalable microservice-based applications using Spring Security, REST APIs, Hibernate (JPA), JWT Authentication, and MySQL. Hands-on experience in deep learning-based computer vision projects using Python, TensorFlow, and VGG19 architecture. Passionate about building secure, efficient, and production-ready software systems.

UNIVERSITY PROJECTS

Landslide Detection from Satellite Imagery Using Deep Learning [Final Year Project] | [\[Link\]](#)

Tech Stack: Python, TensorFlow, Keras, The VGG19, Gabor Filters, OpenCV, Pandas

- Built a hybrid deep learning model integrating the VGG19 architecture with Gabor Filter-based texture feature extraction for automated landslide detection using satellite imagery.
- Achieved 94.82% classification accuracy on an augmented Beijing dataset of 770 satellite images, outperforming traditional ML-based approaches.
- Implemented a fully automatic detection pipeline — including preprocessing, data augmentation, feature extraction, and classification — eliminating manual intervention.
- Conducted comparative analysis of 50+ research papers on ML and deep learning approaches for landslide classification to identify research gaps and validate the proposed approach.
- Applied image preprocessing and augmentation techniques to address dataset imbalance and improve model generalization on unseen satellite images.

Smart Warehouse & Order Fulfillment System | [\[Link\]](#)

Tech Stack: Java, Spring Boot, Spring Security, Spring Cloud Gateway, Eureka, Hibernate (JPA), MySQL, Feign Client, JWT, Microservices

- Developed a distributed microservices-based Warehouse Management System with independent services for Authentication, Product, Inventory, Warehouse, Order, and Route Management.
- Integrated Spring Cloud Gateway and Netflix Eureka for centralized routing, service discovery, and scalable communication between services.
- Implemented secure JWT-based authentication and role-based authorization using Spring Security with stateless session management.
- Integrated Dijkstra's Algorithm in the warehouse route management module to compute the shortest delivery paths between warehouses and improve logistics efficiency.
- Applied modular Controller–Service–Repository architecture to improve maintainability and scalability of backend services.

EXPERIENCE

AI–Data Analyst Intern | Rooman Technologies

May 2025 – Jul 2025

- Planned and executed data analysis workflows using SQL and Python to automate repetitive data collection tasks, reducing manual effort by 30%.
- Initiated structured data pipelines that improved reporting turnaround time by 25%.
- Expanded KPI dashboards to visualize sales and operational performance, enabling data-driven decisions by stakeholders.

ADDITIONAL

Technical Skills:

- **Languages:** Java, Python
- **Databases:** MySQL, SQL
- **Frameworks & Tools:** Spring Boot, Spring Security, Hibernate, JPA, Maven, JUnit 5, Microservices
- **Backend Technologies:** REST APIs, JWT Authentication, Feign Client, Kafka

Certifications & Training: Data Structures and Algorithms (Java) – Udemy, Machine Learning – Stanford University & DeepLearning.AI (Coursera)
