

KADAM TEJESHWAR SAI

kadamtejesh07@gmail.com | +91 8919606909 | linkedin.com/in/Tejeshwar-Sai-kadam/

Profile

Backend Developer skilled in Java, Spring Boot, REST APIs, Spring Security, Hibernate/JPA, JWT, Microservices, and MySQL. Experienced in developing secure, scalable backend applications, implementing service-to-service communication with Feign Client, and applying OOP, Data Structures & Algorithms, and distributed systems concepts.

Work Experience

- Java Backend Developer Intern (Team Lead) | Infotact SolutionsJune 2026 – August 2026
- Led a 4-member team in developing GridWeaver, an IoT Microgrid State Engine, using Claude AI as a development assistant while reviewing, understanding, and integrating the generated Java and Spring Boot implementation.
 - Built and analysed a high-concurrency IoT ingestion layer using Java 21 Virtual Threads, supporting 10,000+ simultaneous connections with a 99% success rate.
 - Used Claude AI to implement a Spring State Machine for battery lifecycle management, integrate Apache Kafka for asynchronous event processing, and develop WebSocket communication for real-time dashboard updates.

Skills

- Languages : Java, Python.
- Databases : SQL (MYSQL).
- Frameworks & Tools : Spring Boot, Spring Security, Hibernate, JPA, Maven, JUnit5, Microservices.
- Backend : REST API Development, JWT Auth, MVC, Feign Client, Kafka.
- Core Concepts : OOPs, Data Structures & Algorithms, Multithreading, Exception Handling.

Projects

- Smart Warehouse & Order Fulfillment System | [\[Link\]](#)Deployment | [\[Link\]](#)
- Engineered a Spring Boot warehouse management backend with REST APIs for products, warehouses, inventory, customers, orders, and route management, using Java, Spring Data JPA, Hibernate, and MySQL with a layered Controller-Service-Repository architecture.
 - Implemented JWT-based authentication and role-based authorization using Spring Security, including BCrypt password hashing, stateless session management, custom JWT filtering, and access controls for ADMIN and MANAGER operations.
 - Designed an inventory-aware order fulfilment engine that calculates available stock across warehouses, allocates products based on proximity, updates inventory and warehouse load, creates order line items, and computes order totals within transactional service operations.
 - Implemented Dijkstra's shortest-path algorithm using warehouse-route graphs and priority queues to rank warehouses by minimum travel distance, integrating the routing logic with order fulfillment; deployed the Spring Boot backend on Render and React frontend on Vercel.
- GridWeaver - Virtual Thread IoT Microgrid State Engine | [\[Link\]](#)
- Built a real-time microgrid backend with Java 21 Virtual Threads, supporting 10,000+ concurrent IoT connections while understanding and validating AI-assisted code implementations.
 - Implemented a Spring State Machine for controlled battery state transitions and integrated Apache Kafka to decouple high-volume IoT ingestion from downstream processing, using AI as a development assistant to explore implementation approaches and refine the code.
 - Streamed live backend state changes to a React dashboard via WebSocket, eliminating client-side polling for real-time updates.
 - Designed a zone-based load-balancing service using thread-safe data structures to detect and simulate regional power redistribution.

Education	
Sri Venkateswara College of Engineering (SVCE), Tirupati	2022-2026
B. Tech in Computer Science and Engineering (AI&ML) CGPA: 9.55	
Viswasai Jr College	2020-2022
MPC Percentage: 94.9%	
Sri Venkateswara Children's High school	2019-2020
10 th standard GPA: 10/10	
Certificates	
Data structures and Algorithms (Java)-Udemy	
Machine Learning - Stanford University & DeepLearning.AI (Coursera)
